nutriment

Clinical and observational studies in Health and Food

CEN Nutriment is a CRO (Contract Research Organization) specialized in clinical trials and observational studies for ingredients, dietary supplements and functional foods.

CEN Nutriment is a member of the french cluster **VITAGORA**® « Taste, Food and Health »

CEN Nutriment

CEN Experimental

Expertise in all phases of the clinical development of your products

Ingredients - Dietary Supplements - Functional Foods

We design the galenic form the most appropriate for your product and develop its placebo.

CEN Nutriment has a network of nearly 1,000 physician investigators experienced in clinical research.

Managed by Professor François-André ALLAERT, Head of the Health Claims Assessment Chair, CEN Nutriment has a recognized expertise in biostatistics.

In general practice, as in all medical specialties, our observational studies support the demonstration of the effects of your products in the real daily medical practice.

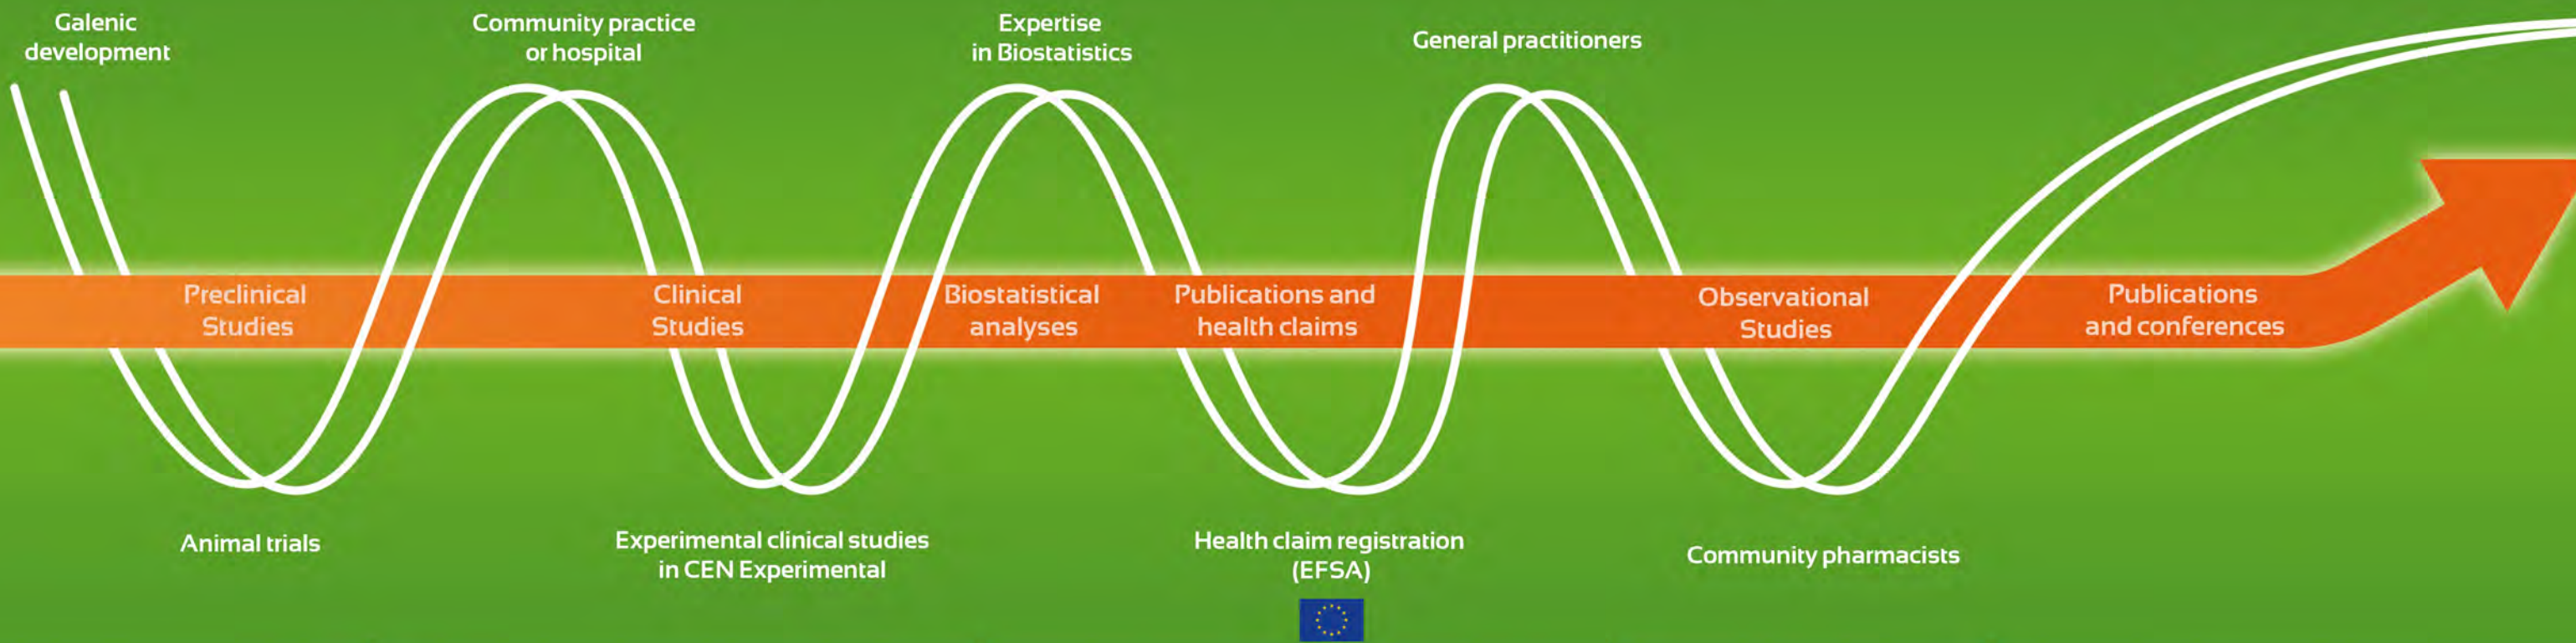

CEN Nutriment has developed videos presenting the setting up of clinical studies. Therefore the MD or the pharmacist is more involved in the conduct of the study with a video protocol easily available at any time.

With our partners: Expertise Center of Sport Performance to experiment the efficacy of products proposed in the sport nutrition.

Gerontopole to study various fields of investigation, from the active senior to the elderly.

In collaboration with ETAP, preclinical Research Centre

CEN Experimental is a clinical investigation center. It proposes an area of 700m² to conduct clinical trials in all the fields where the ingredients and dietary supplements may contribute to the welfare and human health.

CEN Nutriment is a center conducting statistical analysis and implementing nutritional epidemiological studies, nutri-economical studies and nutritional observational studies in daily practice.

Our studies conducted with community pharmacists support the added value of your products and of the advices from pharmacists.

More than 1000 national and international scientific communications and publications.

Our partners

ETAP

CEN Nutriment and ETAP, preclinical Research Centre, work closely together to demonstrate the efficacy and safety of food products and functional ingredients required to obtain a health claim. CEN Nutriment and ETAP provide continuity of studies, from the animal model to humans in a wide variety of fields: digestive comfort, cognition, oxidative stress, stress, immunity, sleep ...

CEP

The partnership with the Expertise Centre for Sport Performance of Dijon University is a unique platform in Europe to test the effectiveness of dietary supplements and ingredients used in sport nutrition. More than 1000m², 30 different types of training machines and hundreds of sportmen are at your disposal.

Gerontopole

The partnership with Gerontopole offers us the opportunity to study nutrition, since the active senior-age to the elderly, living in town or in institutions, and that in various fields: strengthening bone, muscle and joint pain, quality of life, immunity, memory, vision, cardiovascular, urinary, appetite

EMMAS Chair

The Health Claim Assessment Chair was created three years ago by Pr François-André Allaert. Its main objective is the evaluation of the health claim of new products but also the analyses of the patients/consumers behaviours and empowerment.

“Our goal is to provide an appropriate response built in close relation with the partner. That makes the difference with other structures which usually have a standardized response to Food-Health projects that are both complex and unique.”

Professor François-André ALLAERT
Medical Doctor and Pharmacist
Head of the Health Claim Assessment Chair
